Experience

E2 Web Services

June 2025 – March 2026

Full Stack Developer

Noida, India

- Developing modular, scalable front-end web interfaces using Angular to deliver user-centric web applications.
- Integrating RESTful APIs with UI components for dynamic data synchronization across web modules.
- Working in Agile environment participating in sprint planning, code reviews, and issue resolution.
- Collaborating with backend engineers to define data contracts, improve API performance, and reduce payload.
- Optimizing UI performance through lazy-loading modules, caching REST results, and reusable services.

Technical Skills

Languages: Python, JavaScript, HTML, CSS, Node.js

Frontend: React.js, Tailwind CSS

Backend: Flask, Django, Express.js, REST APIs

Databases: MongoDB, SQL

Other: API Integration, Responsive UI Development

Projects

Sanwliya Seth E-commerce Website — Frontend Development & API Integration — Live Website

- Worked on the official e-commerce website of Sanwliya Seth during company tenure, focusing on frontend development and API integration.
- Developed responsive and reusable UI components using React to ensure smooth user experience across devices.
- Integrated backend APIs for product listing, category management, dynamic content rendering, and user interactions.
- Implemented real-time data synchronization protocols utilizing REST APIs, reducing latency by 400ms and improving the responsiveness of the product catalog.
- Collaborated with backend developers to align API contracts, fix integration issues, and improve performance.
- Improved page responsiveness, UI consistency, and component reusability following production-level coding practices.

Book Your Ride — React, Node.js, Express.js, MongoDB, Google Maps API, Tailwind CSS -link

- Built a full-stack ride booking platform with geolocation-based pickup and real-time ride tracking using Google Maps API.
- Designed a secure authentication system supporting role-based access (Rider/Driver), session management, and token validation.
- Implemented RESTful routing for ride booking flow, including ride request creation, driver assignment, trip updates, and ride history.
- Developed responsive UI components using React and Tailwind CSS with modern layouts and reusable component structure.
- Used Socket.io for live ride status updates and trip data synchronization between connected clients.
- Architected backend logic using Express.js with organized controllers, middleware, and services using MVC design pattern.

Certifications

- | | |
|--|------------------------------|
| • Core Java Certification — Coding Ninjas | January 2023 – February 2023 |
| • Frontend Development — Coding Ninjas | May 2023 – June 2023 |
| • Backend Development with Node.js — Coding Ninjas | July 2023 – November 2023 |

Education

Noida Institute of Engineering and Technology

Master of Computer Applications (MCA) — 75%

Greater Noida, Uttar Pradesh
